# ASSET TRACKING SOLUTIONS

Track Physical Assets Anywhere on Any Device

## Why Do Customers Choose AssetCloud?

AssetCloud provides customers with an intelligent view of the past, present and future of all asset interactions.

With AssetCloud, users can:

- 
-  **Expedite Fixed Asset Check-Out/Check-In**  
Track the location of fixed assets, who is in possession of the assets, and when assets are due back. Checking out assets assigns responsibility to an employee, a customer, a student or even a vendor. Checking in assets releases end-user responsibility and allows the assets to be reallocated.
  -  **Perform Audits to Verify and Eliminate Inconsistencies**  
Users can quickly conduct audits on a mobile computer, iOS or Android device in order to verify what assets the organization actually owns, and where the assets are located.
  -  **Create Reports for Accountability and Insight**  
Users have the ability to design custom reports specifically to fit their business and tracking needs, or use the 30+ common reports that come pre-built within AssetCloud's reporting suite.
  -  **Trigger Notifications for Critical Intelligence**  
AssetCloud's notification engine allows users to set custom triggers to save time and empower them with instant feedback on asset-related events within their organization.
  -  **Manage Maintenance and Work Orders**  
The quick maintenance feature allows users to assign maintenance tasks to individual assets, and create work orders that are assigned to multiple people, contain one or multiple assets and require the completion of one or more tasks.
  -  **Centralize Asset Visibility**  
AssetCloud often replaces error-prone manual processes that involve numerous people managing critical asset data across various spreadsheets.
  -  **Manage Security Roles**  
Create custom user roles and assign users to those roles so employees have access to only the information and features they need.
  -  **Configure Depreciation for Accurate Bookkeeping**  
The ability to set up depreciation classes and calculate depreciation makes it easy for organizations to maintain proper record keeping.
  -  **Inventory Identical Multi-Quantity Assets**  
Organizations are able to quickly consolidate and track any number of identical assets with AssetCloud's multi-quantity asset feature. This saves a tremendous amount of time for organizations required to track hundreds or thousands of identical assets.
  -  **Consolidate Contracts, Service Agreements, and Licenses**  
AssetCloud provides organizations with one centralized database that manages all contracts, service agreements and software licenses.

## The Challenge

Like many educational institutions, Gwinnett Technical College is the recipient of educational grants, and the assets purchased with those grants must be tracked and accurately reported on regularly.

When Jeanette Faucett arrived on campus as the Asset Management Coordinator, she inherited a system that relied upon spreadsheets and antiquated manual tracking practices. "My top priority was to get everything accounted for in our current buildings as well as to barcode and track new assets coming in." "Our assets were harder to track before using AssetCloud. Our annual inventory process took much longer before using the software and scanning system. By using AssetCloud, we have a simple and more accurate way of tracking," she said.

## The Solution

Faucett heard about Wasp Barcode Technologies from a colleague at another college. After speaking with a tracking solution consultant at Wasp, she decided Wasp's AssetCloud was a great solution for Gwinnett.

### Easy to Scale

Gwinnett deployed Wasp's cloud asset management solution to track over 10,000 physical assets across multiple widespread campuses, scattered over numerous buildings and assigned to several departments.

### Easy to Onboard

Gwinnett chose to include a full day of in-person training as part of their AssetCloud implementation. Faucett found the training extremely helpful, especially learning how to customize reports, particularly with the college's specific and detailed grant reporting requirements.

### Easy to Use

When Faucett and her team first began to use AssetCloud, they had pages of assets that had been tracked on a spreadsheet. "Being able to import all of our assets right into AssetCloud made our jobs easier," he explained. "That was definitely one of my favorite features."

## The Result

AssetCloud has helped operations become 75% faster than their previous system. Now, all Gwinnett employees who access AssetCloud, from all locations on campus, can view up-to-date information anytime.

“ Our assets were harder to track before using AssetCloud. Our annual inventory process took much longer before using the software and scanning system. By using AssetCloud, we have a simple and more accurate way of tracking. ”
